

# Natural gas is coming to Nordegg

From our founding in 1972 to today, our member-owned utility provider has been helping to grow communities through providing natural gas, a source of heat and fuel. This collective effort is where communities come together to provide essential energy.

In that co-operative spirit, Rocky Gas Co-op in collaboration with Clearwater County and the Province of Alberta made it a priority to bring natural gas service to the Hamlet of Nordegg.

We are excited to bring affordable, reliable, clean, and efficient natural gas to your community.

## ➞ Why switch to natural gas?

In the event of an emergency, natural gas can be quickly shut off, limiting fuel supply, rather than large tanks of propane which pose a safety risk, especially during fires.

Propane is prone to “freeze offs” at low temperatures, meaning you lose heat when you need it most. Natural gas is a reliable and consistent supply.

Natural gas is more affordable. 39 liters of propane equals 1 gigajoule of natural gas.
